REPAIR GUIDE

WARNING: Be sure to turn off the power switch and disconnect the power cord plug from the power supply before conducting repair.

1. Precautions on disassembly and reassembly

[Bold] numbers in the description below correspond to the item numbers in the Parts List and exploded assembly diagram for the Model WR 22SE.

Disassembly

1. Disassembly of hammer case (D) ass'y

(1) Removal of hammer case (D) ass'y

Remove the Button Bolt M4 [44] and four Bolts M5 x 45 [3]. Supporting Hammer Case (D) Ass'y [1], tap the tip of the Anvil [9] with a wooden hammer to remove Hammer Case (D) Ass'y [1]. Remove Packing (D) [26] from between Hammer Case (D) Ass'y [1] and Inner Cover (D) [27].

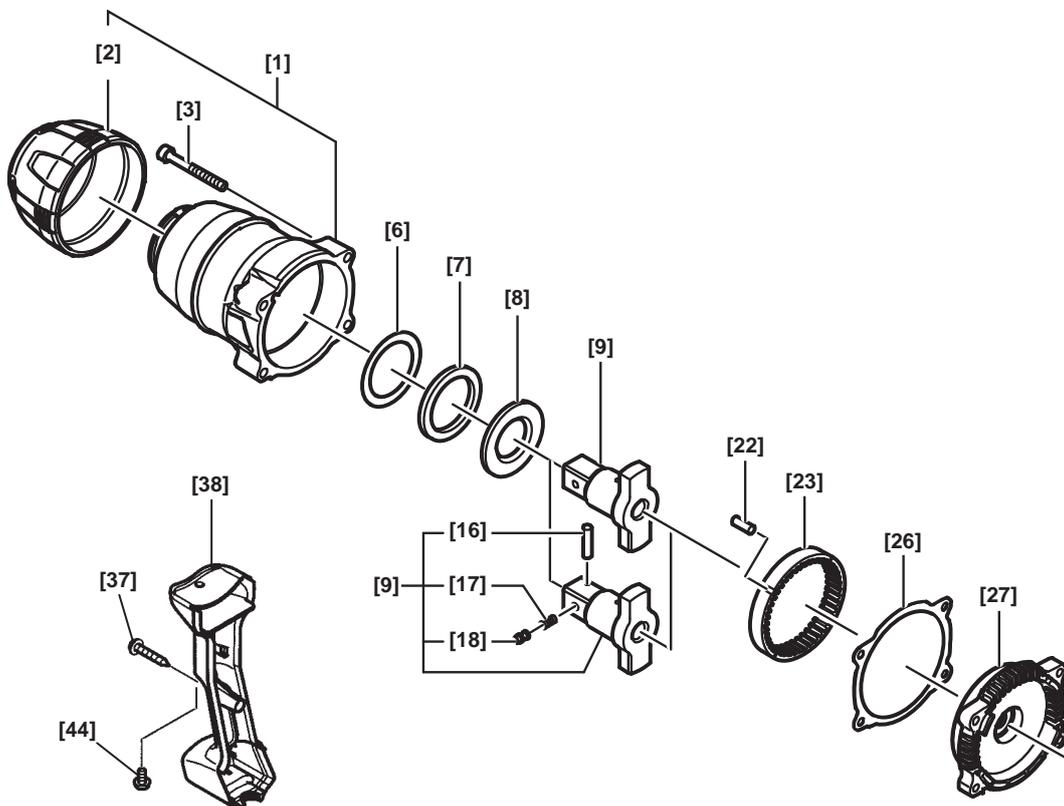

(2) Removal of the anvil

Remove the Anvil [9] from the bearing portion of Hammer Case Ass'y (D) [1].

(3) Removal of the ring gear

Tap the end surface of Hammer Case Ass'y (D) [1] with a wooden hammer to remove the Ring Gear [23]. If the Ring Gear [23] cannot be removed, warm up Hammer Case (D) Ass'y [1] and tap it with a wooden hammer to remove the Ring Gear [23].

Fig. 1 • Disassembly of hammer case (D) ass'y

3. Disassembly of the motor unit

(1) Removal of rotor ass'y (D)

Remove Rotor Ass'y (D) [29] together with Inner Cover (D) [27] from Housing (D) [34].

NOTE: Keep the removed Rotor Ass'y (D) [29] away from iron or other metal because Rotor Ass'y (D) [29] has a magnetic force.

(2) Remove the two Screws D4 x 60 [32], Screw D4 x 35 [37], and two Screws D4 x 16 [46]. Then remove the power supply unit.

Fig. 4 • Disassembly of the motor unit

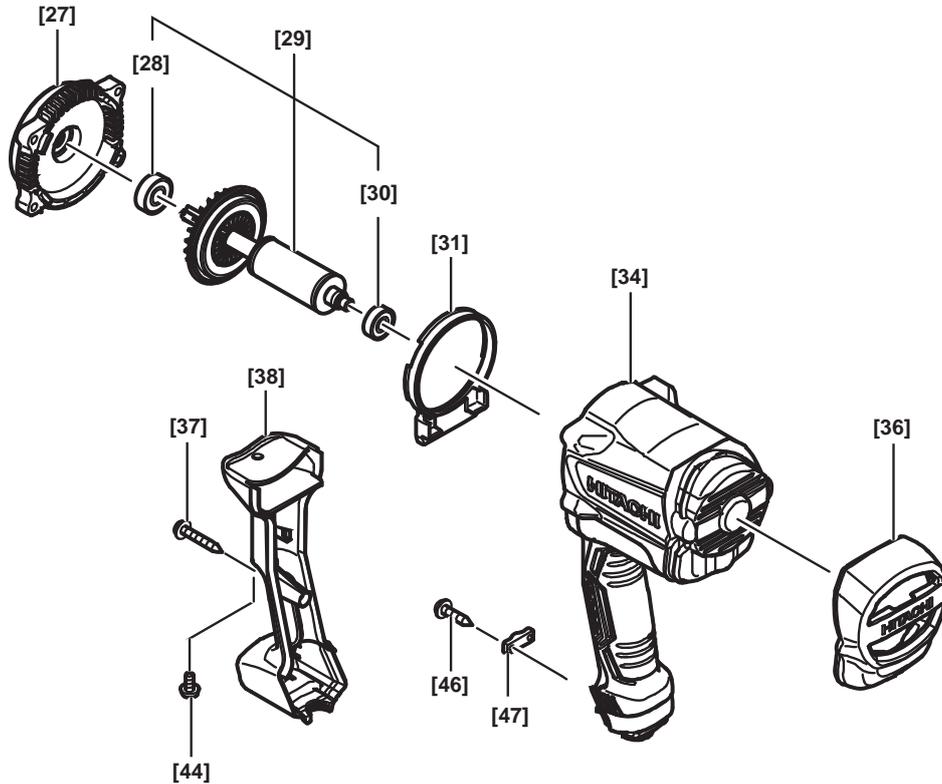

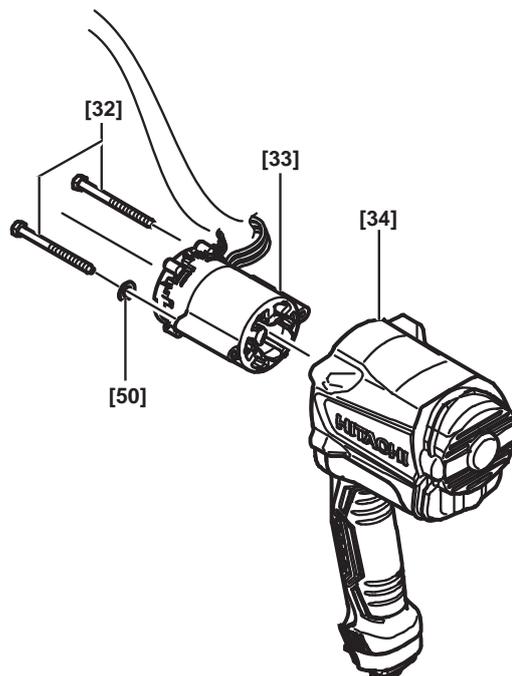

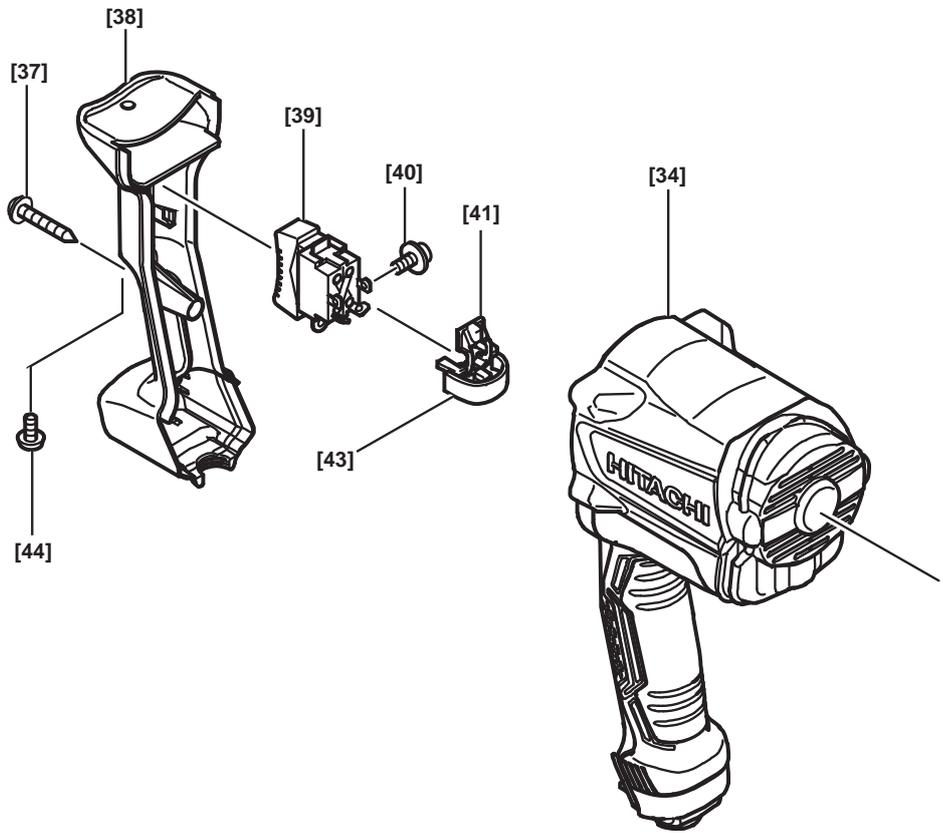

Fig. 5

4. Removal of the switch

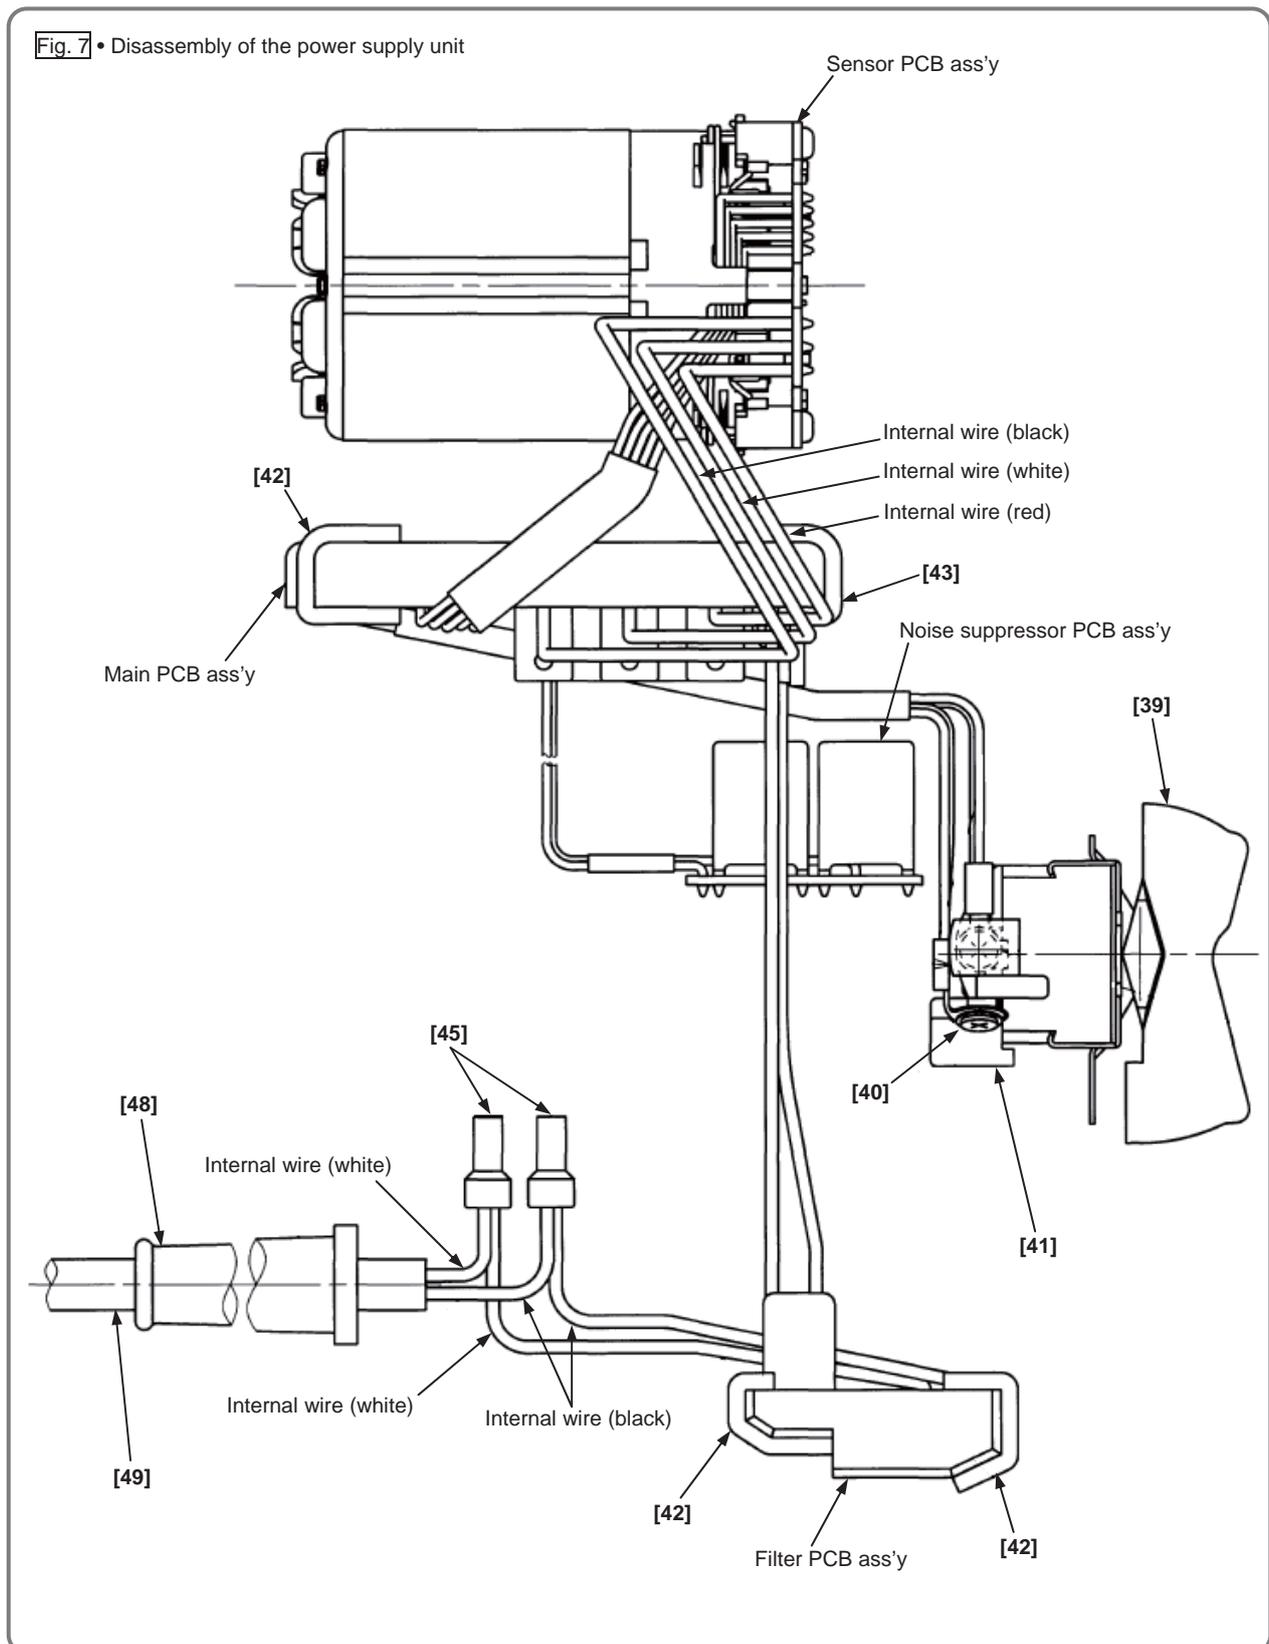

Remove the four Screws M3.5 x 5 [40] from the Switch [39] and remove the Switch Adapter [41]. Then remove the Switch [39].

Fig. 6 • Removal of the switch

5. Disassembly of the power supply unit

- (1) Remove the four Screws M3.5 x 5 [40] from the Switch [39].
- (2) Hold the Switch Adapter [41] and slowly pull it out.

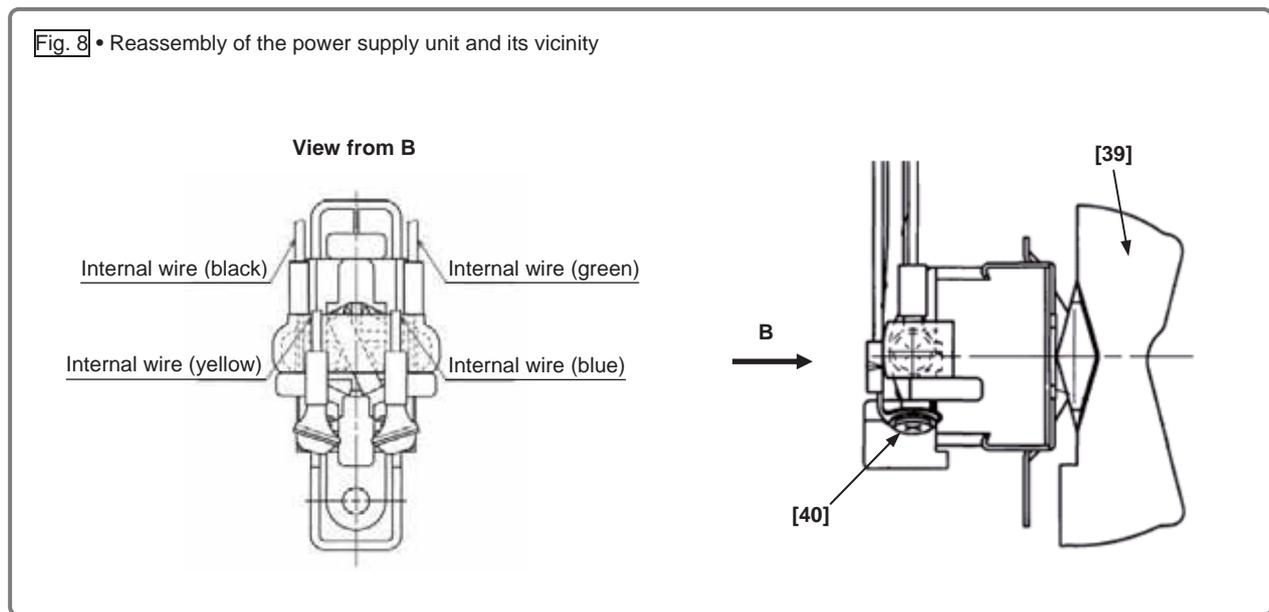

Reassembly

Perform reassembly by reversing the disassembly procedure. However, special attention should be given to the following items.

1. Reassembly of the power supply unit and its vicinity

- (1) Perform wiring according to the connecting diagram on page 9 when replacing the Switch [39] or Stator Controller (D) Set [33] with new one.
- (2) Connect the internal wires of Stator Controller (D) Set [33] to the Switch [39] paying attention to the colors of the internal wires. Then secure them with the four Screws M3.5 x 5 [40].
- (3) Be careful not to get the internal wires caught in the power supply unit.

2. Reassembly of the impact mechanism

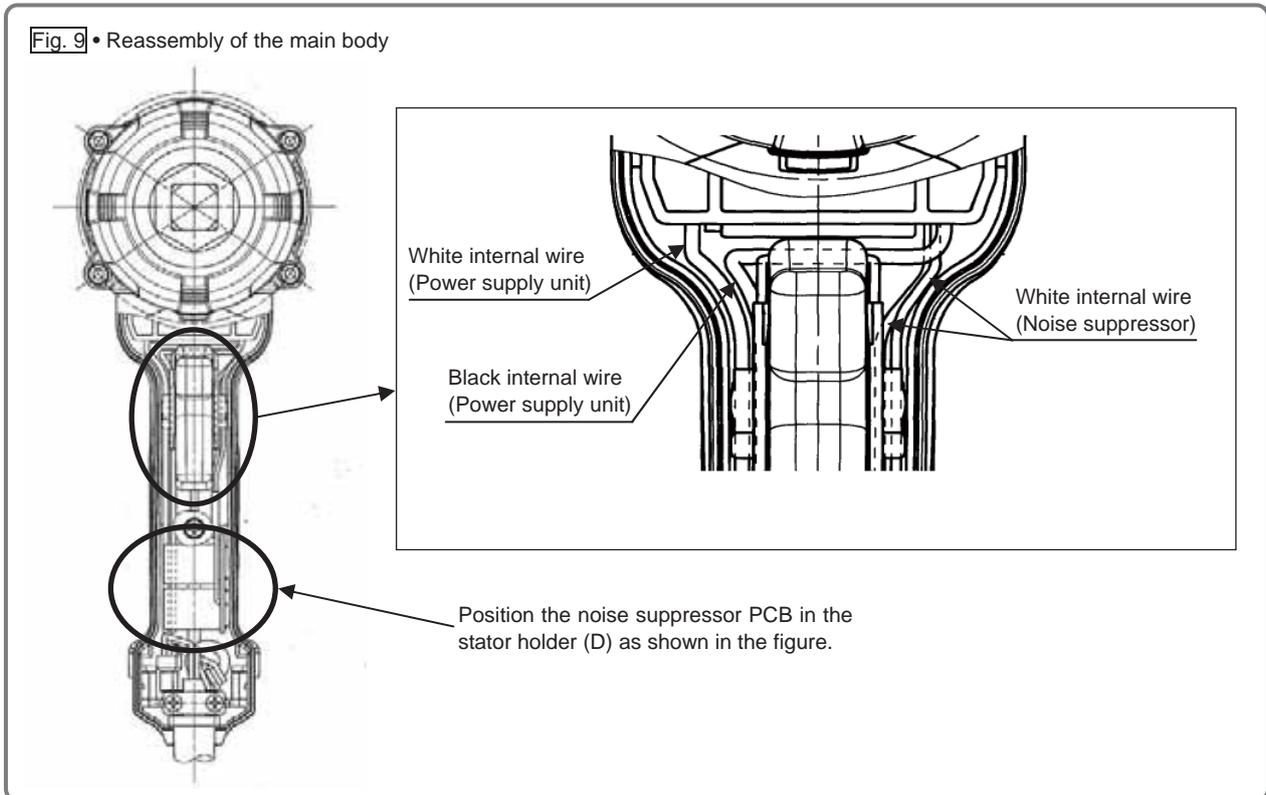

- (1) Mount the Hammer Washer [13], Spring [14], Spring Seat [15], and Spindle [20] in this order into Hammer (D) [11], which contains the thirty-eight Steel Balls D3.97 [12].
- (2) Match the peak of the cam groove of the Spindle [20] with the steel ball insertion groove of Hammer (D) [11]. Use a hand press or similar tool to press the raised portion of Hammer (D) [11] so as to compress the Spring [14] until it contacts the Spindle [20], and then hold it there.
- (3) Put the two Steel Balls D7.14 [10] in the steel ball insertion groove. Check that the Steel Balls D7.14 [10] are in the cam groove, and then release the hand press.
- (4) Mount the Idle Gear Set (2 pcs.) [21] and the two Gear Shafts [19] on the Spindle [20].

3. Reassembly of the main body

- (1) Secure the stator to Housing (D) [34] with the two Screws D4 x 60 [32] and insert the controller PCB ass'y (D) into the lower portion of the stator.
- (2) Mount the Cord Clip [47] with its protrusion toward the cord, and then secure it with the two Screws D4 x 16 [46].
- (3) Position the internal wires under the Switch [39].

NOTE: Position the internal wire of the noise suppressor PCB on the right, and the internal wire of the power supply PCB on the left. Position the green and yellow internal wires of the switch on the right, and the blue and black internal wires on the left. Then insert the Switch [39].

Fig. 9 • Reassembly of the main body

(4) Mount Rotor Ass'y (D) [29] and Fan Guide (D) [31] to Housing (D) [34].

NOTE: Be careful of the direction of Fan Guide (D) [31].

(5) Secure Handle Cover (D) [38] to Housing (D) [34] with the Screw D4 x 35 [37].

(6) Mount Metal (E) [25] and Packing (D) [26] to Inner Cover (D) [27].

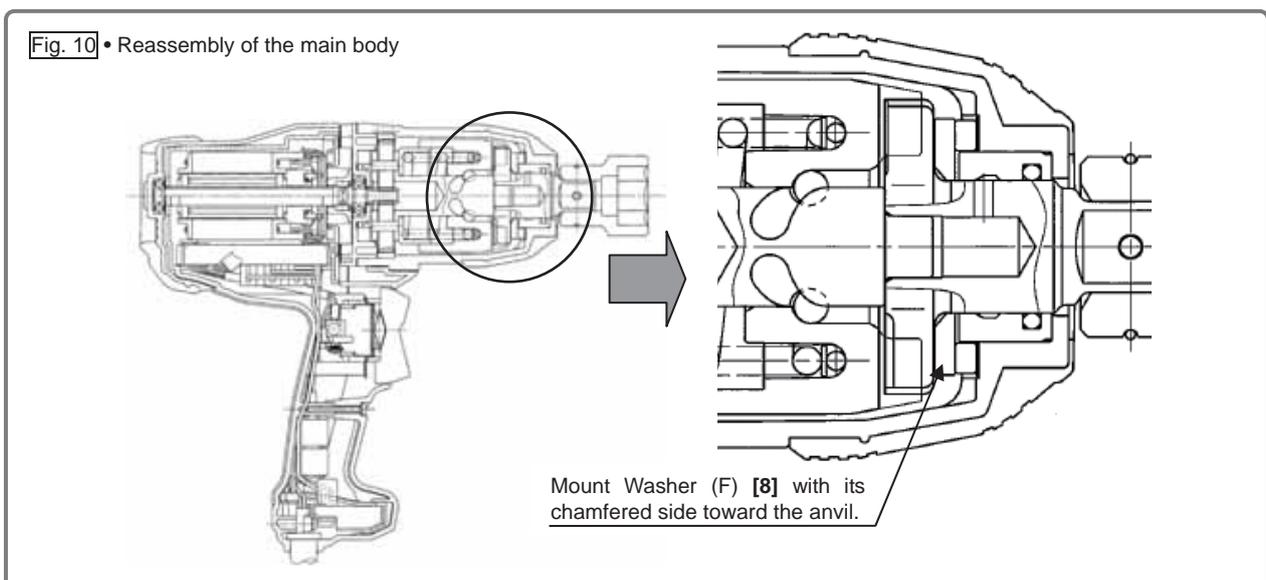

NOTE: Do not mount Packing (D) [26] upside down.

(7) Mount Washer (E) [24] and Ring Gear [23] to the impact mechanism and mount it to Inner Cover (D) [27].

NOTE: Mount the Ring Gear [23] with its protrusion toward the hammer case.

(8) Mount Washer (F) [8] to the Anvil [9]. Apply a small amount of grease to the Needle Roller [22] and mount it to the Ring Gear [23].

Fig. 10 • Reassembly of the main body

(9) Insert Washer (D) [6] and Damper (D) [7] into Hammer Case (D) Ass'y [1] and secure it with the four Bolts M5 x 45 [3].

(10) Secure Handle Cover (D) [38] and Hammer Case (D) Ass'y [1] with the Button Bolt M4 [44].

Application of lubricant

(1) Apply Nippeco SEP-3A grease (Code No. 930035 (100 g)/930038 (2.5 kg)) to the following:

- Pinion tooth flanks of Rotor Ass'y (D) [29]
- Tooth flanks of the Ring Gear [23]
- Two Gear Shafts [19]
- Tooth flanks and inner circumference of the Idle Gear Set (2 pcs.) [21]

(2) Apply Doubrex 251 grease to the following:

- Between Hammer (D) [11] and Spring Seat [15]
- Inside of Hammer Case (D) Ass'y [1]
- Spindle [20]: Cam groove, sliding portion, and engaging portions with the Anvil [9] and Metal (E) [25]
- Cam groove and raised portions of Hammer (D) [11]
- Anvil [9]: 13 mm dia. hole, sliding portion with Washer (F) [8], claw, and sliding portion with the O-ring
- Two Steel Balls D7.14 [10]
- Thirty-eight Steel Balls D3.97 [12]
- Both end surfaces of Washer (D) [6] and Damper (D) [7]

Screw tightening torque

- Seal Lock Hex. Socket Hd. Bolt M5 x 45 [3] ----- 7.8 ± 1.5 N•m (80 ± 15 kgf•cm)
- Tapping Screw (W/Flange) D4 x 35 (Black) [37] ----- 2.0 ± 0.5 N•m (20 ± 5 kgf•cm)
- Hex. Hd. Tapping Screw D4 x 60 [32] ----- 2.0 ± 0.5 N•m (20 ± 5 kgf•cm)
- Button Bolt M4 [44] ----- 1.8 ± 0.4 N•m (18 ± 4 kgf•cm)
- Tapping Screw (W/Flange) D4 x 16 [46] ----- 2.0 ± 0.5 N•m (20 ± 5 kgf•cm)

Checking after reassembly

Check the following after reassembly:

- (1) Operate the Switch [39] and check that the switch moves smoothly and the switch operations (ON, OFF, forward and reverse) are normal.
- (2) Press the Switch [39] in "R" direction and slowly release the switch. Check that the switch returns to the original position. Then press the Switch [39] in "L" direction and slowly release the switch. Check that the switch returns to the original position.
- (3) Check that the rotational direction of Anvil [9] matches the direction of rotation made when you press the Switch [39]. When the Switch [39] is set to the "R" position, the Anvil [9] must rotate clockwise as viewed from the rear (opposite to the Anvil [9].)

Insulation test

On completion of reassembly after repair, measure the insulation resistance and conduct the dielectric strength test between the plug pins and the outside metallic parts such as the Anvil [9].

Insulation resistance: 7 MΩ or more

Dielectric strength: 2,500 V for 1 minute ----- 110 V to 120 V

4,000 V for 1 minute ----- 220 V to 240 V

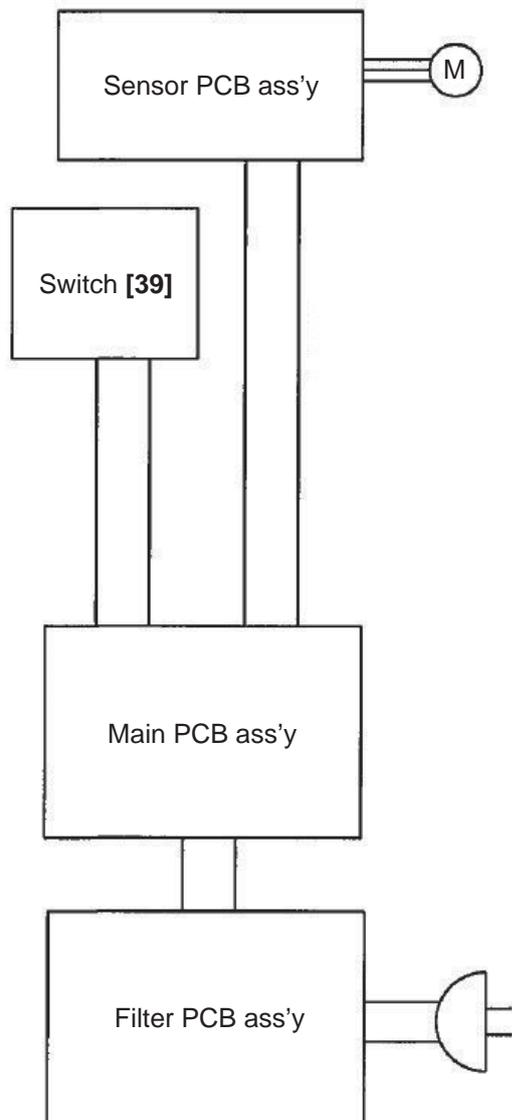

No-load current

After no-load operation for 30 minutes, the no-load current value should be as follows.

Voltage	110 V	120 V	220 V	230 V	240 V
Current max.	3.5 A	3.5 A	1.5 A	1.5 A	1.5 A
