ALARM SYSTEM

**More
than security**

www.satel.eu

VERSA – more than alarm system

We present a system that will allow you to secure a flat or apartment, a small or medium sized house, an office or other premises. The VERSA alarm system will take care not only of **adequate and effective protection**, but will also make your family, fellow workers or customers of your company **feel comfortable and good**. It will see to everything what is most important to you, ensuring your **peace of mind and confidence** that everything is fine!

The VERSA alarm system means **safety in a beautiful setting**. Discover the unique pleasure of using state-of-the-art control devices, which will not only make the daily operation of your system easier, but more attractive as well.

Security and comfort within reach

The touch screen keypad is not only a modern alternative to traditional keypad models. Its intuitive interface allows you to use just a few taps to run commands for daily tasks. The device is therefore a great solution for people who value their time and convenience.

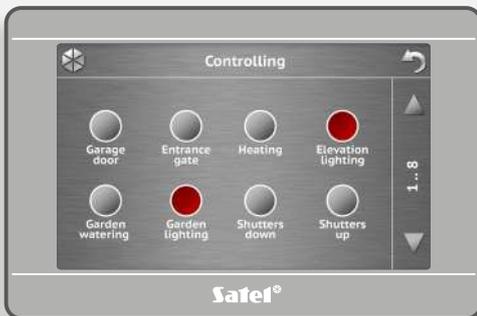

The capacitive glass screen ensures the highest quality of daily operation.

Quick and easy arming /disarming the system, turning on/off lighting, heating, air conditioning, etc.

Facilitation of everyday system control thanks to the start screen, which can be freely configured.

Digital frame – automatic scrolling of photos

The modern appearance of the device, slim enclosure and, in the case of the INT-TSG model, also small dimensions (screen size 4.3"), are factors that make the keypad optically almost blend into the wall on which it is mounted. Hence, integrating the device with any interior, regardless of its arrangement, is by no means a problem. What's more, the keypad can be a remarkable interior decoration – not only because of its modern design, which will surely arouse the interest of your guests. When it is not used, it can act as a digital frame. All you have to do is load a few favorite photos that will be displayed as a slide show on the screen of your device.

Control your system the way you want!

From the wide range of possibilities to control the VERSA alarm system, choose the one that will be most convenient for you and your loved ones. For local operation of the system, use a keypad. In our product offering you will find various models of these devices: wired or wireless, with classic keys or with touch screen and graphical interface, with LCD display or, in economic version, with LED indicators. The latter not only allows you to easily control the alarm system functions, but also the tasks related to home automation (including lighting, heating or air conditioning).

VERSA-LED-GR

VERSA-LCD-BL

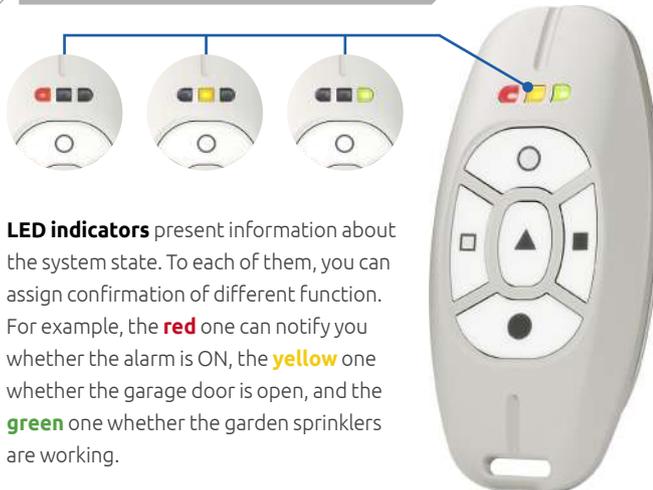

VERSA-LCDR-WH

VERSA-KWRL2

In addition, the VERSA-LCDR-WH and VERSA-KWRL2 models are equipped with a proximity tag / proximity card reader, and thus provide even faster access to the system for the household members, without having to remember passwords.

You can use up to **6 keypads** in one VERSA alarm system.

One keyfob – many possibilities

LED indicators present information about the system state. To each of them, you can assign confirmation of different function. For example, the **red** one can notify you whether the alarm is ON, the **yellow** one whether the garage door is open, and the **green** one whether the garden sprinklers are working.

The daily operation of the alarm system can also be done remotely. When you are on the premises, you can use for this purpose a remote control keyfob, e.g. the APT-200* model. Depending on the configuration, it will allow you to perform a whole range of tasks, ranging from arming / disarming the system or calling emergency assistance, to controlling garage door, roller shutters / blinds, etc. A unique function of this keyfob is confirmation by LEDs that your commands have been executed. To make the everyday operation easier, the keyfob comes with backlit buttons and a built-in buzzer that reacts to pressing any key and indicates whether the control panel has received the command.

* The APT-200 keyfob works as part of the ABAX 2 two-way wireless system, which offers a full range of wireless devices for the VERSA control panel.

Remotely, easily, reliably

Gain access to the VERSA alarm system from whenever you are. Take advantage of the enormity of possibilities offered to you by remote control using your mobile device with the VERSA CONTROL application installed.

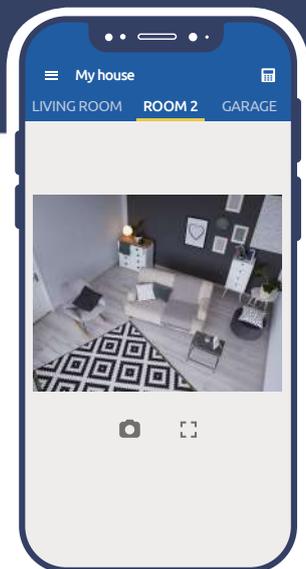

Watch over the security of your home wherever you are. This will be made easier by PUSH notifications, which will immediately inform you about selected events registered by the control panel.

Do you happen sometimes to leave the light on in the bathroom or hallway in the morning rush? Or maybe you are not sure if you have armed the alarm? Now you can check it remotely and, if necessary, arm the system or turn off unnecessary lighting, thus saving electricity and ensuring yourself precious peace of mind.

Do you value your time and comfort? Thanks to the application, you gain access to all information and have remote control capabilities always at your fingertips.

Everything under control!

Are you away from home for long time? Or you had to leave urgently, and now your children are with a babysitter? Or maybe you are worried about a pet left at home for the weekend? You do not have to think about it anymore. Everything is under control thanks to VERSA CONTROL!

If you have IP cameras installed on your premises, in your house or apartment, the application will allow you to quickly view the images from these devices.

All you need is a few taps on the screen of your mobile device to know that your loved ones are safe.

Full screen
preview

In addition, thanks to the audio verification function, you can connect to the control panel (VERSA Plus or VERSA IP), which will switch you to the speakerphone mode. Thus you will not only see your household members, but will be able to communicate with them.

How to outwit the burglar?

Audio verification

Surprise the burglar using ... your own voice! Use for this purpose the audio verification function available in the VERSA Plus and VERSA IP control panels. All you need to do is call the number of your control panel, which will allow you to listen in to what is going on in your home during your absence—and more. Thanks to a special module equipped with a loudspeaker, you can, after detecting the presence of an intruder, even scare him away by saying out loud a few firm messages (e.g. "The police are coming").

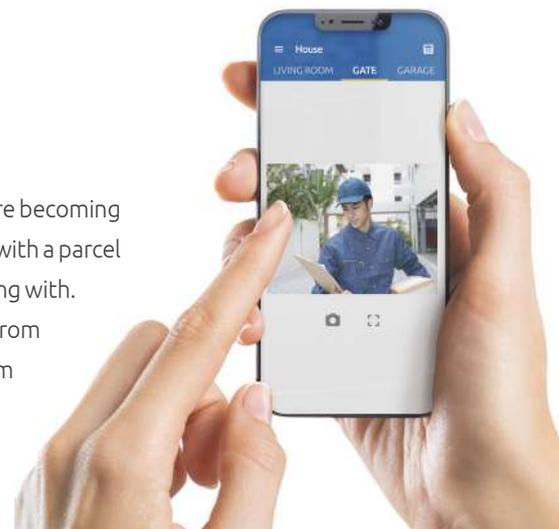

Great light protection after dark

How to use lighting control to increase the security of your home? During your absence, the VERSA system can periodically turn on and off the light in the rooms with windows. Thus the intruder will think that the household members are inside the house, which may stop him from attempted burglary. However, if he decides to cross the fence, he will be detected by outdoor motion detectors, which will not only trigger an alarm, but also turn on the outdoor lighting. Even if it does not scare the intruder away, the light will make his figure more visible in the image recorded by the monitoring cameras, which will facilitate the subsequent identification of the criminal.

Mobile monitoring

The methods burglars are resorting to are more and more audacious. For this reason, people are becoming distrustful. Do you not feel anxious when a courier calls you and says he is waiting at your gate with a parcel you do not expect? Before you disarm the outdoor alarm to let him in, check who you are dealing with. Use for this purpose the VERSA CONTROL application, which will allow you to see live images from IP cameras installed on your premises. If he is indeed a delivery man, you can deactivate the alarm for a while and open the gate—also with the help of the application. Everything under control!

Even more comfort

Your smart home

With the VERSA system, everyday life in your home will be even more comfortable. It is because it allows you to easily perform basic tasks related to home automation. You can thus using one keypad, keyfob or mobile application not only arm/disarm the alarm system, but also turn on/off lighting, heating or air conditioning at any time. In the same way, you will take care of your plants by starting the garden sprinklers, as well as of your own convenience by controlling the garage door and entrance gate as well as roller blinds or shutters.

Easier access to the system

In various everyday situations, you may need solutions that will simplify as much as possible such operations as disarming the alarm system. An excellent solution is the possibility of access without having to enter the password, which is offered by the VERSA system. All you need to do is use a proximity tag or proximity card on a special partition control module (INT-CR) or a keypad (VERSA-LCDR-WH /VERSA-KWRL2) with built-in reader. You do not have to worry anymore that you or any of your family members may forget the password!

You can carry the proximity tag with your keys to keep it always at hand.

2 card sizes

Thick

Thin

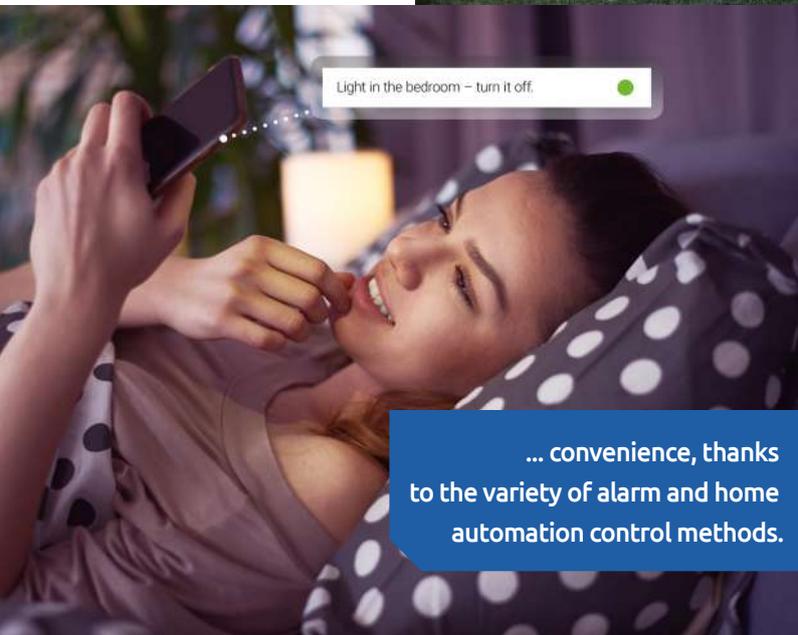

You can carry the thin card even in your wallet together with a credit card.

The VERSA alarm system means ...

... comprehensive and effective protection of small and medium-sized buildings.

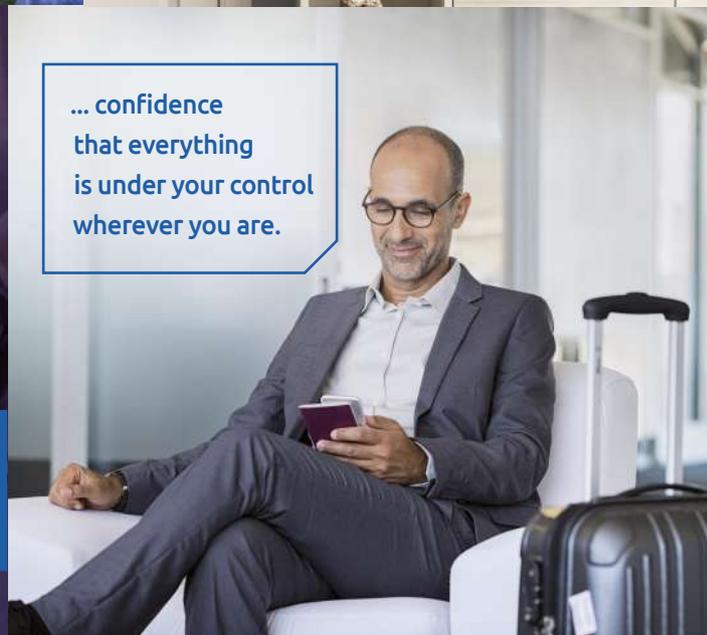

... security in a beautiful setting, e.g. state-of-the-art touch screen keypads.

... convenience, thanks to the variety of alarm and home automation control methods.

... confidence that everything is under your control wherever you are.
