all stainless steel construction, "solid-front"
class 0,25%
DS 6" (150mm)

These instruments have been designed for laboratories, instrument testing or recalibration facilities and to be used in other applications where accuracy and repeatability are of primary importance. They are provided with a solid separating wall in stainless steel, placed between the dial and the elastic element and with a blow out back that is released from the case whenever a pressure is created inside the case because of leaks or accidental damage of the elastic element. The process fluids should be gases or liquids, they must not have high viscosity and must not cristalize. They can be employed in the worst working conditions determined by aggressive medium and environment thanks to the wetted parts in AISI 316L. The calibration certificate issued by a laboratory officially recognized by ACCREDIA (Ex S.I.T. - Italian Calibration Service) is available upon request.
