## Discrete Transducers

Our family of DIN-rail discrete transducers measure a wide range of electrical parameters and generate analogue output signals suitable for interfacing with instrumentation and control systems.

Transducers have either one or two outputs, each type being available in several variants for output configuration and auxiliary supply input. All outputs are galvanically isolated.

## Applications

- Instrumentation panels
- Control systems
- Electrical distribution panels
- Transmission systems and generators
- SCADA systems

## Benefits

- The range measures all the common electrical parameters
- Easy to install and configure
- Can be mounted in any orientation
- Protected against electrical disturbance

## Features

- DIN-rail mounting
- Accuracy class: 0.5s (0.2s optional)
- Response time < 300 ms ( 300 ms fixed for size C5)
- Variety of input and output configuration curves
- Wide range of parameters:
- AC voltage or current
- DC voltage or current
- Active or reactive power
- Combined power (active and reactive)
- Frequency
