

General Specifications

EJX910A Multivariable Transmitter

GS 01C25R01-01EN

[Style: S2]

The high performance EJX910A multivariable transmitter features multi-sensing technology with a single-crystal silicon resonant sensor that outputs the measured differential pressure, static pressure and process temperature, which covers multiple protocols: HART, FOUNDATION fieldbus and RS485 Modbus.

Additionally the HART protocol and FOUNDATION fieldbus protocol types are suitable to measure dynamically calculated and fully compensated mass flow for liquid, gas, or steam. 4 to 20 mA DC signal output is available in HART protocol type.

A multi-sensing version is also available for users who do not require flow calculation functions. FDT/DTM* standard conforming software is available for transmitter configuration. FSA120 FlowNavigator is used for flow configuration of the HART protocol and FOUNDATION fieldbus protocol types.

*: FDT (Field Device Tool): Defines the system environment in which the DTM runs.
DTM (Device Type Manager): The application which defines the graphical user interface (GUI) specific to the device.

Key features:

[HART protocol type]

- Saturated Steam Mode for HART Protocol Revision 7 and Device Revision 12 or later
External temperature can be calculated and output from static pressure by using the built-in steam table (IAPWS-IF97) without external temperature input.
- 1.0% mass flow rate accuracy over 1:10 flow range (In case of uncalibrated differential producer (Orifice))
- HART7: Orifice, Nozzle, Venturi, Multiport Averaging Pitot and Cone meters primary devices are supported
- HART5: Orifice, Nozzle and Venturi primary devices are supported
- Advanced diagnostic function (option)
- Simultaneous dual output of 4 to 20mA and pulse signals.
- HART protocol revision selectable from 5 (HART 5) or 7 (HART 7)
- Long tag supporting up to 32 characters (HART 7)
- Enhanced burst mode and event notification(HART 7)
- SIL2 for safety requirement

Note: HART 5 stands for HART protocol revision 5
HART 7 stands for HART protocol revision 7

[FOUNDATION Fieldbus protocol type]

- 1.0% mass flow rate accuracy over 1:10 flow range (In case of uncalibrated differential producer (Orifice))
- Orifice, Nozzle and Venturi primary devices are supported
- Advanced diagnostic function (option)
- Various function blocks available; 5 AIs, AR, IT, SC, and IS as standard. PID as an optional feature.
- Cyclically displays up to 10 variables
- Software download function (option)

[Modbus protocol type]

- RS485 Modbus protocol type provides easy multi-sensing data transmission to the flow computers.
- The process data status is provided for each measured differential pressure, static pressure and process temperature. It is easy to implement process data diagnosis.
- Cyclically displays up to 16 variables including RTU management data.
- Up to 32 transmitters can be connected by multi-drop communication.
- 32 characters long tag and squawk are supported for easy identification of transmitters.

■ STANDARD SPECIFICATIONS

□ SPAN AND RANGE LIMITS

Differential Pressure (DP)

Measurement Span/Range	kPa	inH ₂ O (D1)	mbar (D3)	mmH ₂ O (D4)	
L	Span	0.1 to 10	0.4 to 40	1 to 100	10 to 1000
	Range	-10 to 10	-40 to 40	-100 to 100	-1000 to 1000
M	Span	0.5 to 100	2 to 400	5 to 1000	50 to 10000
	Range	-100 to 100	-400 to 400	-1000 to 1000	-10000 to 10000
H	Span	2.5 to 500	10 to 2000	25 to 5000	0.025 to 5 kgf/cm ²
	Range	-500 to 500	-2000 to 2000	-5000 to 5000	-5 to 5 kgf/cm ²

Static Pressure (SP)

Absolute Pressure

Measurement Span/Range	MPa abs	psia (D1)	bar abs (D3)	kgf/cm ² abs (D4)	
L	Span	1 to 16	145 to 2300	10 to 160	10 to 160
	Range	0 to 16	0 to 2300	0 to 160	0 to 160
M	Span	1 to 25	145 to 3600	10 to 250	10 to 250
	Range	0 to 25	0 to 3600	0 to 250	0 to 250

Gauge Pressure (Sealed gauge)

Measurement Span/Range	MPa	psi (D1)	bar (D3)	kgf/cm ² (D4)	
L	Span	1 to 16	145 to 2300	10 to 160	10 to 160
	Range	-0.1 to 16	-14.5 to 2300	-1 to 160	-1 to 160
M	Span	1 to 25	145 to 3600	10 to 250	10 to 250
	Range	-0.1 to 25	-14.5 to 3600	-1 to 250	-1 to 250

* When the saturated steam mode (ET Fixed = Saturated Steam) is set, static pressure range is 70 kPa abs ~ 22.064 MPa abs (In case of capsule L range, upper limit is 16 MPa abs.)

External Temperature (ET) (Pt100 ohm)

Measurement External Temperature Span/Range	°C	°F	K	
L	Span	10 to 1050	18 to 1890	10 to 1050
	Range	-200 to 850	-328 to 1562	73 to 1123
M	Fixed Temperature	-273 to 1927	-459 to 3500	0 to 2200

* When the saturated steam mode (ET Fixed = Saturated Steam) is set, external temperature value limit is 90 ~ 374°C.

□ PERFORMANCE SPECIFICATIONS

Zero-based calibrated span output, and silicone oil, unless otherwise mentioned.

For FOUNDATION Fieldbus and Modbus protocol types, use calibrated range instead of span in the following specifications.

Specification Conformance

EJX series ensures specification conformance to at least $\pm 3\sigma$.

Mass Flow (For Measurement Function Code B of HART and FOUNDATION Fieldbus protocol types)

Mass Flow Reference Accuracy

$\pm 1.0\%$ of Mass Flow Rate over 10:1 flow range (100:1 DP range) for liquids and gases.

Totalized Mass Flow Reference Accuracy

1.0% of Total Mass Flow.

Note: Assume 100:1 DP range for liquids and gases.

Conditions for mass flow accuracy

(1) Auto compensation mode.

(2) M and H capsule

(3) Uncalibrated differential producer (Orifice) installed based on the following standards. *1

(4) Uncertainties for discharge coefficient, primary device bore, pipe diameter, and gas expansion factor defined on following standards. *1

(5) Density uncertainty less than 0.1%.

*1: Standards: ISO5167-1 1991, ISO5167-2 2003, ASME, MFC-3M 1989, AGA No.3 1992

Differential Pressure (DP)

Reference Accuracy of Calibrated Span (Includes terminal-based linearity, hysteresis, and repeatability)

Measurement span	H	
Reference accuracy	X ≤ span	$\pm 0.04\%$ of Span
	X > span	$\pm (0.005 + 0.0049 \text{ URL}/\text{span})\%$ of Span
X	70 kPa (280 inH ₂ O)	
URL (upper range limit)	500 kPa (2000 inH ₂ O)	

Measurement span	M	
Reference accuracy	X ≤ span	$\pm 0.04\%$ of Span
	X > span	$\pm (0.005 + 0.0035 \text{ URL}/\text{span})\%$ of Span
X	10 kPa (40 inH ₂ O)	
URL (upper range limit)	100 kPa (400 inH ₂ O)	

Measurement span	L	
Reference accuracy	X ≤ span	$\pm 0.04\%$ of Span
	X > span	$\pm (0.015 + 0.005 \text{ URL}/\text{span})\%$ of Span
X	2 kPa (8 inH ₂ O)	
URL (upper range limit)	10 kPa (40 inH ₂ O)	

Ambient Temperature Effects per 28°C (50°F) Change

Capsule	Effect
H	±(0.04% Span + 0.0125% URL)
M	±(0.04% Span + 0.009% URL)
L	±(0.055% Span + 0.09% URL)

Static Pressure Effects per 6.9 MPa (1000 psi) Change

Span Effects

L, M and H capsules

±0.075% of span

Effect on Zero

Capsule	Effect
H	±0.028% URL
M	±0.02% URL
L	±0.05% URL

Overpressure Effects

Overpressure condition: up to maximum working pressure

M and H capsules

±0.03% of URL

Stability (All normal operating condition, including overpressure effects)

M and H capsules

±0.1% of URL per 15 years

Static Pressure (SP)

Reference Accuracy of Calibrated Span for Absolute pressure

(Includes terminal-based linearity, hysteresis, and repeatability)

Capsule	Reference accuracy
L, M, H	±0.1% of span

Note: Gauge pressure reference is 1013.25 hPa (1 atm) The gauge pressure variable is based on the above reference accuracy and can be affected by changes in the atmospheric pressure.

Ambient Temperature Effects per 28°C (50°F) Change

Capsule	Effect
M, H	±0.08% Span ± 0.018% URL
L	±0.08% Span ± 0.028% URL

External temperature (ET)

Accuracy (Includes terminal-based linearity, hysteresis, and repeatability)

Capsule	Accuracy
L, M, H	±0.5°C (±0.9°F)

* Specification for External temperature is the transmitter portion only. Sensor errors caused by the RTD are not included. The transmitter is compatible with any Pt100 RTD conforming to IEC 751. Input/output signal is non-isolated.

** When the saturated steam mode (ET Fixed = Saturated Steam) is set, external temperature is calculated from static pressure by using the built-in steam table. The calculation accuracy is ±0.5°C

Ambient Temperature Effects per 28°C (50°F) Change

Capsule	Effect
L, M, H	±0.5°C (±0.9°F)

Power Supply Effects (HART protocol type)
±0.005 % per Volt (from 21.6 to 32 V DC, 350Ω)

Vibration Effects

Signal	Effect
Differential Pressure	±0.1% of URL
Static Pressure	±0.1% of URL
External Temperature	±0.5°C (±0.9°F)

Amplifier housing code 1:

When tested per the requirements of IEC60770-1 field or pipeline with high vibration level (10-60 Hz, 0.21 mm displacement/60-2000 Hz 3 g)

Amplifier housing code 2:

When tested per the requirements of IEC60770-1 field with general application or pipeline with low vibration level (10-60 Hz 0.15mm displacement /60-500 Hz 2g)

Mounting Position Effects

Rotation in diaphragm plane has no effect.

Tilting up to 90 degree will cause zero shift up to 0.4 kPa (1.6 inH₂O) which can be corrected by the zero adjustment.

Response Time

Signal	Capsule	HART	Fieldbus*1	Modbus
Differential Pressure	L	230 ms	300 ms	230 ms
	M, H	200 ms	300 ms	200 ms
Static Pressure	L, M, H	200 ms	300 ms	200 ms

When amplifier damping is set to zero and including dead time.

*1: Output from transducer block.

FUNCTIONAL SPECIFICATIONS

Output specifications for HART Protocol Type Output

Dual output (Both analog and pulse/contact outputs can be obtained simultaneously. See "Wiring Example for Analog Output and Status/Pulse Output").

HART Protocol Revision

HART protocol revision can be selected from 5 or 7 when ordering.

The protocol revision can be changed by user configuration.

The HART protocol revision at the time of shipment is shown by the last number at the serial number column of the name plate.

Analog Output

Two wire 4 to 20 mA DC output, user-selectable for Differential Pressure, Static Pressure, External Temperature or Flow Rate signal.

Output range: 3.8 mA to 21.6 mA.

Digital HART FSK protocol are superimposed on the 4 to 20 mA signal.

Failure Alarm

Analog output status at CPU failure and hardware error;

Up-scale: 110%, 21.6 mA DC or more (standard)

Down-scale: -2.5%, 3.6 mA DC or less

Analog output status at process abnormality (Option code /DG6);

The result of process abnormality detected by the advanced diagnostic function can be reflected to an analog alert status. The following three setting modes are available.

		Mode		
		Burnout	Fall back	Off
Standard		110%, 21.6mA or more	Holds to a specified value within the output range from 3.8mA to 21.6mA	Normal output
Option Code	/C1	-1.25%, 3.8mA or less		
	/C2	-1.25%, 3.8mA or less		
	/C3	103.1%, 20.5mA or more		

Pulse/Contact Output

Pulse or status output is selected by parameter setting.

Transistor contact output (sink type).

Contact rating: 10.5 to 30 V DC, 120 mA DC max.

Low level: 0 to 2 V DC. (See figure below for high and low levels (pulse output).)

Pulse Output

Scaled pulse or frequency pulse output is selectable by parameter setting.

Scaled Pulse Output Function

Pulse is output by the unit of the scaled flow rate. Scaled pulse can be totalized.

Frequency Output Function

Number of pulses output per second at 100% of output.

Pulse frequency: Max. 10 kHz

Duty cycles: Approx. 50% (1:2 to 2:1)

Contact Output Function

High or low alarm

Status signal output mode can be reversed (ON/OFF).

Signal Output

Output	Flow rate*1	Differential pressure	Static pressure	External temperature	Total flow*1
4-20mA	✓*3	✓*2	✓	✓	
Pulse output	✓				✓
High/Low alarm	✓	✓	✓	✓	

*1: When Measurement function code B is specified.

*2: Square root output is not available. Low cut linear mode is not supported.

*3: Reversed output is not available.

Output specifications for FOUNDATION Fieldbus Protocol Type

Output

Digital communication signal based on the FOUNDATION fieldbus specification.

Functional Specifications

Functional specifications for Fieldbus communication conform to the standard specification (H1) of FOUNDATION fieldbus.

Function Block

Block name	Number	Execution time	Note
AI	5	30 ms	For flow, differential pressure, static pressure, external temperature and capsule or amplifier temperature.
SC	1	30 ms	An output of Signal characterizer block is a nonlinear function of the respective input. The function is determined by a table.
IT	1	30 ms	Integrator block intergrates a variable as a function of the time of accumulates the counts.
IS	1	30 ms	Input Selector block provides selection of up to eight inputs and generate an output based on the configured action.
AR	1	30 ms	Arithmetic block allows simple use of popular measurement math functions.
PID	1	45 ms	Applicable when /LC1 option is specified.

LM Function

LM function is supported.

Output specifications for Modbus Protocol Type

Item	Description
Communication protocol	2-wire half duplex RS-485 Modbus
Flow control	None
Baud rate	1200, 4800, 9600*, 19200
Start bit	1 bit (Fixed)
Stop bit	1 bit*, 2 bits
Parity bit	Odd, Even, None*
Transfer mode	RTU (Remote Terminal Unit)
	Data length: 8 bits
	LSB (Least significant bit sent first)
Slave address	1* to 247
Support function	1: Read Coils
	2: Read Discrete Inputs
	3: Read Holding Registers
	4: Read Input Register
	5: Write Single Coil
	8: Diagnostic (00: Return Query Data)
	16: Write Multiple registers
43: Read device Identification	
Bus termination	Standard RS-485 bus termination ON (bus end), OFF* (not bus end)

*: Factory default setting

Advanced Diagnostics (option for HART and FOUNDATION Fieldbus protocol types)

- Impulse line blockage detection
The impulse line condition can be calculated and detected by extracting the fluctuation component from the differential pressure and static pressure signals. Also EJX910A detects the impulse line abnormality particularly which side of impulse line is plugged.
- Heat trace monitoring
The change of the flange temperature calculated by using the two temperature sensors built in the EJX910A enables to detect the heat trace breakage or the abnormal temperature due to the failure.

Saturated Steam Mode for HART Protocol Revision 7 and Device Revision 12 or later

When the saturated steam mode (ET Fixed = Saturated Steam) is set, external temperature is calculated from static pressure by using the built-in steam table (IAPWS-IF97) and its value limit is 90 to 374°C. The static pressure range corresponding to the external temperature value limit is 70 kPa to 22.064 MPa. Errors caused by disconnection of RTD sensor do not occur in the mode.

Note: Setting of the ET fixed mode affects the external temperature range (ET LRV/URV) that can be set (saturated steam mode: 100 to 349°C, others: -210 to 860°C). Set the properly external temperature range when the mode is saturated steam.

Note: External temperature configuration and value is limited when calculating flow value of saturated steam (Following IAPWS-IF97).

1. Output external temperature measured by RTD sensor:
Configuration: ET Fixed = No
External temperature value limit: 0 to 374°C (Under saturated steam state)
2. Output external temperature calculated from the static pressure by using the built-in steam table:
Configuration: ET Fixed = Saturated Steam
External temperature value limit: 90 to 374°C

Damping Time Constant (1st order)

Amplifier damping time constant is adjustable from 0.00 to 100.00 seconds and added to response time, applicable independently for "DP, SP, ET, and flow" for HART, FOUNDATION fieldbus and "DP, SP, and ET" for Modbus.

When the saturated steam mode (ET Fixed = Saturated Steam) is set, the damping setting of the external temperature is disabled, and its time constant value is treated as zero.

Update Period

Signal	HART	Fieldbus	Modbus
Flow rate	100 ms	200 ms	—
Differential pressure	100 ms	200 ms	100 ms
Static pressure	100 ms	200 ms	100 ms
External temperature	400 ms	800 ms	400 ms
Total flow	1000 ms	—*	—

*: Output from IT function block.

Zero Adjustment Limits

Zero can be fully elevated or suppressed, within the lower and upper range limits of the capsule, applicable for DP, SP, and ET independently.

External Zero Adjustment

External zero for DP is continuously adjustable with 0.01% incremental resolution of span.

When the saturated steam mode (ET Fixed = Saturated Steam) is set, zero-point adjustment of the external temperature is disabled, and its trim value (ET LTD) is treated as zero.

Integral Indicator (LCD)

5-digit (Flow, DP, SP, and ET) or 6-digit (Total flow) numerical display, 6-digit unit display and bar graph. The indicator is configurable to display one or up to four variables periodically.

For FOUNDATION Fieldbus, the indicator is configurable to display up to 10 function block output values.

For Modbus, the indicator is configurable to display up to 16 output values including RTU output.

Burst Pressure Limits

69 MPa (10000 psi)

Self Diagnostics

CPU failure, hardware failure, configuration error, process alarm for differential pressure, static pressure and external temperature.

SIL Certification

EJX series transmitters except FOUNDATION Fieldbus and Modbus protocol types are certified by TÜV in compliance with the following standards; IEC 61508: 2010; Part1 to Part 7 Functional Safety of electrical/electronic/programmable electronic safety-related systems; SIL 2 capability for single transmitter use, SIL 3 capability for dual transmitter use.

Functions Applicable for HART Protocol Revision 7

- Long tag supporting up to 32 characters
Long tag secures a better asset management with abundant digits in its software.
- Enhanced burst mode and event notification
Advanced burst mode includes the variety of transmission setting by specifying burst variables, update period, and message trigger mode, and event notification function gives you alert signal based on the status change in preset values and self-diagnosis.
- Squawk
Identifying the transmitter by displaying the particular pattern on LCD
- Multidrop communication
Up to 63 transmitters can be connected. An analog signal output available for one device in a loop.

Functions Applicable for Modbus Protocol

- Process data diagnosis
The process data status is provided for each measured differential pressure, static pressure and process temperature. Also device status parameter is available for detail diagnosis.
- Long tag supporting up to 32 characters
Long tag secures a better asset management with abundant digits.
- Squawk
Identifying the transmitter by displaying the particular pattern on LCD.
- Multi-drop communication
Up to 32 transmitters can be connected.

■ Mass Flow Calculation

(For Measurement function code B of HART and FOUNDATION Fieldbus protocol types)

□ Auto Compensation Mode (FSA120 FlowNavigator is required for configuration)

Configuration of the fluid physical properties and primary element for the EJX900 series can be performed using a dialog window of FSA120. All flow factors for mass flow calculation are dynamically compensated to an optimum value. In Auto mode, mass flow can be measured with high accuracy.

The flow factors that are automatically compensated are discharge coefficient, diameter of primary device, upstream internal pipe diameter, gas expansion factor, density, and viscosity.

Supported primary devices are different by output signal type.

HART 7 protocol type: Orifice, Nozzle, Venturi, Multiport Averaging Pitot and Cone meters

HART 5 and FOUNDATION Fieldbus protocol types: Orifice, Nozzle, Venturi

FlowNavigator: FSA120 Flow Configuration Software (refer to GS 01C25R51-01EN). The software package is used to perform mass flow configuration for the EJX910A. These software can also read and write the general parameters of HART communications or FOUNDATION Fieldbus communication. Configuration of the fluid physical properties and the primary element of the EJX900 series can be done by means of a dialog menu.

User Flow Parameters (flow settings information input by FSA120 FlowNavigator) are stored to the transmitter when the device revision is 12 or later.

□ **Basic Flow Calculation Mode**

Flow operation and density compensation are performed conventionally, with the flow factors being input manually.

The operational expression is switched by the fluid type and the unit setting.

Density compensation by phase:

Gas: Compensation as ideal gas by temperature and pressure.

Liquid: Compensation by temperature.

Flow unit categories: See Table 1.

Table 1. Flow Operational Expression

Fluid type	Flow unit Category	Flow equation
Liquid	Mass Flow	$Q_m, Q_v \text{ or } Q_{v_norm} = \frac{Kfactor}{\sqrt{\Delta P \times (1 + Temp K1 \times (T - T_b))}}$ *1
	Normal-Standard Volume Flow	$\times \sqrt{\Delta P \times (1 + Temp K1 \times (T - T_b))}$
	Volume Flow	
Gas	Mass Flow	$Q_m \text{ or } Q_{v_norm} = \frac{Kfactor}{\sqrt{\Delta P \times T_b / T \times SP / SP_b}}$ *1
	Normal-Standard Volume Flow	$\times \sqrt{\Delta P \times T_b / T \times SP / SP_b}$
	Volume Flow	

*1: --- : User setting parameter

Table 2. Symbol

Symbol	Description
Qm	Mass Flow
Qv	Volume Flow
Qv_norm	Normal-Standard Volume Flow
Kfactor	Basic flow Calculation factor
ΔP	Differential Pressure (Transmitter Setting unit)
Tb	Reference temperature unit: K
T	Temperature unit: K
SPb	Reference static pressure unit: kPa abs
SP	Static Pressure unit: kPa abs
Temp K1	The density rate of change per temperature 1degC of a density base value (value which set 100% to 1) For Volume Flow: Set 0

■ **NORMAL OPERATING CONDITION**

(Optional features or approval codes may affect limits.)

Ambient Temperature Limits

–40 to 85°C (–40 to 185°F)

–30 to 80°C (–22 to 176°F) with LCD display

Process Temperature Limits

–40 to 120°C (–40 to 248°F)

Ambient Humidity Limits

0 to 100% RH

Working Pressure Limits (Silicone oil)

Maximum Pressure Limits

L Capsule	16 MPa (2300 psi)
M and H Capsule	25 MPa (3600 psi)

Minimum Pressure Limit

See figure below.

Figure 1. Working Pressure and Process Temperature

Supply & Load Requirements (for HART protocol type)

(Optional features or safety approvals may affect electrical requirements.)

With 24 V DC supply, up to a 570Ω load can be used. See figure below.

Figure 2. Relationship Between Power Supply Voltage and External Load Resistance

Supply Voltage

[for HART]

10.5 to 42 V DC for general use and flameproof type.

10.5 to 32 V DC for lightning protector (Option code / A).

10.5 to 30 V DC for intrinsically safe, type n or nonincendive.

Minimum voltage limited at 16.6 V DC for HART communication.

[for FOUNDATION fieldbus]

9 to 32 V DC for general use, flameproof type, Type n or nonincendive.

[for Modbus]

9 to 30 V DC 250 mW for general use and flameproof type, quiescent supply current 10 mA typical

Load (for HART protocol type)

0 to 1335Ω for operation

250 to 600Ω for digital communication

FOUNDATION Fieldbus**Communication Requirements**

Supply Voltage: 9 to 32 V DC

Current draw :

Steady state 15 mA (max)

Software download state 24 mA (max)

EMC Conformity Standards

EN61326-1 Class A, Table2

EN61326-2-3

EN61326-2-5 (for fieldbus)

European Pressure Equipment Directive**2014/68/EU**

Sound Engineering Practice (for all capsules)

With option code /PE3 (for M and H capsules)

Category III, Module H, Type of Equipment : Pressure

Accessory-Vessel, type of Fluid: Liquid and Gas,

Group of fluid: 1 and 2

EU RoHS Directive

EN IEC 63000

Safety Requirement Standards

C22.2 No.61010-1, C22.2 No.61010-2-030

- Installation category: I
(Anticipated transient overvoltage 330V)
- Pollution degree: 2
- Indoor/Outdoor use

■ PHYSICAL SPECIFICATIONS**Wetted Parts Materials****Diaphragm, cover flange, process connector, capsule gasket, and vent/drain plug**

See "MODEL AND SUFFIX CODES."

Process connector gasket

PTFE Teflon

Fluorinated rubber for option code N2 and N3

Non-wetted Parts Materials**Bolts**

B7 carbon steel, 316L SST or 660 SST

Housing

• Low copper cast aluminum alloy

• ASTM CF-8M Stainless steel (optional)

Coating of housing

[for aluminum housing]

Polyester resin powder coating

Mint-green paint (Munsell 5.6BG 3.3/2.9 or its equivalent)

[for option code /P□ or /X2]

Epoxy and polyurethane resin solvent coating

Degrees of protection

IP66/IP67, Type 4X

Cover O-rings

Buna-N, fluoro-rubber (optional)

Name plate and tag

316 SST

Fill fluid

Silicone oil, fluorinated oil (optional)

Cable for RTD

External Temperature Input Code -1, -2, -3, -4

Oil-proof and a heat-resistant cable with a shield

Outside diameter: 8.5 mm (0.335 inch),

Voltage rating: 300V

Temperature rating: -40 to 105°C (-40 to 221°F)

Frame resistance: UL (CSA) VW-1

Adaptation standard: UL (CSA) AWM STYLE 2517

External Temperature Input Code -B,-C,-D

A heat-resistant FEP cable with a shield

Outside diameter: 4.3mm (0.168 inch)

Voltage rating: 300V

Temperature rating: -80 to 200°C (-112 to 392°F)

Flame resistance: NEC Article 800-CMP

Adaptation standard: NEC Article 725-PLTC

Note for using an extension cable:

When extending a temperature cable with using an extension cable and a junction box, total cable length including the original external temperature cable must be less than 25 m. Use PE or XLPE insulated cable for extension.

Cable gland:

Nickel plating brass

Weight

2.8 kg (6.2 lb) without integral indicator, mounting bracket, process connector and RTD cable.

Add 1.5 kg (3.3 lb) for Amplifier housing code 2.

Connections

See "MODEL AND SUFFIX CODES."

Process connection of cover flange: IEC61518

MODEL AND SUFFIX CODES

Model	Suffix Codes	Description
EJX910A	Multivariable transmitter
Output signal	-E -J -F -M	4 to 20 mA DC with digital communication (HART protocol) ^{*8} 4 to 20 mA DC with digital communication (HART 5/HART 7 protocol) ^{*9} Digital communication (FOUNDATION fieldbus protocol) Digital communication (RS485 Modbus protocol) When Output signal code -M is selected, option code A must also be selected.

External temperature input	-0 -1 -2 -3 -4 -B -C -D	Fixed temperature (without cable) ^{*5*11} RTD input with 0.5 m (1.64 ft) of shielded cable and two cable glands ^{*3*7*10} RTD input with 4 m (13.1 ft) of shielded cable and two cable glands ^{*3*7*10} RTD input with 7.5 m (24.6 ft) of shielded cable and two cable glands ^{*3*7*10} RTD input with 25 m (81 ft) of shielded cable and two cable glands ^{*3*7*10} RTD input with 4 m (13.1 ft) of shielded cable without cable gland ^{*3*4} RTD input with 7.5 m (24.6 ft) of shielded cable without cable gland ^{*3*4} RTD input with 25 m (81 ft) of shielded cable without cable gland ^{*3*4}
Measurement function	▶ A. . . B. . .	Multi Sensing (DP, P and T) ^{*12} Mass Flow Measurement (Flow, DP, P and T) (Applicable for Output signal codes -E, -J, and -F).
Option codes		/□ Optional specification

The “▶” marks indicate the most typical selection for each specification.

*1: ⚠ Users must consider the characteristics of selected wetted parts material and the influence of process fluids. The use of inappropriate materials can result in the leakage of corrosive process fluids and cause injury to personnel and/or damage to plant facilities. It is also possible that the diaphragm itself can be damaged and that material from the broken diaphragm and the fill fluid can contaminate the user’s process fluids.

Be very careful with highly corrosive process fluids such as hydrochloric acid, sulfuric acid, hydrogen sulfide, sodium hypochlorite, and high-temperature steam (150°C [302°F] or above). Contact Yokogawa for detailed information of the wetted parts material.

*2: For External temperature input code 0 (Fixed temperature) .

*3: Recommended External Temperature Input Cable is as shown in Table 4. RTD is not provided.

*4: Specify when using conduit for RTD connection.

*5: Preset external temperature value is used for density compensation.

- *6: Material of a blind plug is aluminum alloy or 304 SST.
- *7: Not applicable for Amplifier housing code 2.
- *8: Output signal code E: HART 5.
- *9: Output signal code J: HART 5 or HART 7 selectable. Specify HART 5 or HART 7 when ordering. (Output signal code J is recommended for HART communication.)
- *10: Refer to table 6 whether the cable glands are attached or not.
- *11: If you use the saturated steam mode (external temperature is calculated from static pressure), set ET fixed parameter to Saturated Steam after shipping.
- *12: No flow calculation function. When using the flow calculation function, specify code B.
- *13: For position adjustable bracket, refer to SD 01C25B14-01EN.

□ Selection guide for HART 5 and HART 7

Select HART 5 or HART 7 as follow.

Output signal code	Specified item when ordering "HART protocol revision"	HART protocol revision	Selection guide		Note
			Requirement for HART 7 function	Other conditions	
-E	Not Available	HART 5	NO	Not available to switch to HART 7 protocol after delivery.	*
-J	Specify '5'			Available to switch to HART 7 protocol after delivery by user-configuration.	**
		Specify '7'	HART 7	YES In this case, be sure to confirm that HART configuration tool supports HART 7 by Table 3.	Available to switch to HART 5 protocol after delivery by user-configuration.

- *: This code will be unified to the new code "-J". Therefore the code "-J" is recommended for HART communication type.
- ** : In case of selecting HART 7 without conforming to Table 3, communication will not be available.

□ HART protocol revision and communication

Protocol revision supported by HART configuration tool must be the same or higher than that of the EJX multivariable transmitter.

Table 3. HART protocol revision and communication

		Protocol revision supported by HART configuration tool	
		HART 5	HART 7
Protocol revision of EJX multivariable transmitter	HART 5	Communication Available	Communication Available
	HART 7	Communication Not Available	Communication Available

Contact Yokogawa representative for the codes indicated as '—'

- *1: Not Applicable for Output signal codes -E and -J.
- *2: Not Applicable for Output signal code -F.
- *3: Not Applicable for Output signal code -M.
- *4: Applicable for Electrical connection codes 2, 4, 7, 9, C, and D.
- *5: Lower limit of ambient temperature is -15°C (5°F) when option code HE is specified.

OPTIONAL SPECIFICATIONS

Item		Description	Code
Painting	Color change	Amplifier cover only	P□
		Amplifier cover and terminal cover, Munsell 7.5 R4/14	PR
	Coating change	Anti-corrosion coating*1	X2
316 SST exterior parts		316 SST zero-adjustment screw and setscrews*15	HC
Fluoro-rubber O-ring		All O-rings of amplifier housing. Lower limit of ambient temperature: -15°C (5°F)	HE
Lightning protector		HART protocol type: Transmitter power supply voltage: 10.5 to 32 V DC Allowable current: Max. 6000 A (1×40 μs), Repeating 1000 A (1×40 μs) 100 times Applicable Standards: IEC 61000-4-4, IEC 61000-4-5 FOUNDATION fieldbus protocol type: Allowable current: Max. 6000 A (1×40 μs), Repeating 1000 A (1×40 μs) 100 times Applicable Standards: IEC 61000-4-4, IEC 61000-4-5 Modbus protocol type: Applicable Standards: IEC 61000-4-5 This option (option code A) must be selected when Modbus protocol type (Output signal code -M) is selected.	A
Oil-prohibited use*2	Degrease cleansing treatment		K1
	Degrease cleansing treatment and fluorinated oilfilled capsule. Operating temperature -20 to 80°C (-4 to 176°F)		K2
	Degrease cleansing treatment	With certificates	K41
	Degrease cleansing treatment and fluorinated oilfilled capsule. Operating temperature -20 to 80°C (-4 to 176°F)		K42
Oil-prohibited use with dehydrating treatment*2	Degrease cleansing and dehydrating treatment		K5
	Degrease cleansing and dehydrating treatment with fluorinated oilfilled capsule. Operating temperature -20 to 80°C (-4 to 176°F)		K6
	Degrease cleansing and dehydrating treatment	With certificates	K45
	Degrease cleansing and dehydrating treatment with fluorinated oilfilled capsule. Operating temperature -20 to 80°C (-4 to 176°F)		K46
Capsule fill fluid		Fluorinated oil filled in capsule Operating temperature -20 to 80°C (-4 to 176°F)	K3
Calibration units*3	P calibration (psi unit)	(See Table for Span and Range Limits.)	D1
	bar calibration (bar unit)		D3
	M calibration (kgf/cm ² unit)		D4
Plug option*22	Long vent *4 Total length: 119 mm (standard: 34 mm); Total length when combining with option code K1,K2, K5, and K6: 130 mm. Material: 316 SST		U1
	Without vent and drain plugs		UN
Gold-plated *2		Surface of isolating diaphragms are gold plated, effective for hydrogen permeation. Overpressure effects for M and H capsules: ±0.06% of URL	A1
Output limits and failure operation*5 (for HART protocol type)	Failure alarm down-scale: Output status at CPU failure and hardware error is -2.5%, 3.6 mA DC or less.		C1
	NAMUR NE43 Compliant Output signal limits: 3.8 mA to 20.5 mA	Failure alarm down-scale: Output status at CPU failure and hardware error is -2.5%, 3.6 mA DC or less.	C2
		Failure alarm up-scale: Output status at CPU failure and hardware error is 110%, 21.6 mA or more.	C3
Body option*6 	Right side high pressure, without drain and vent plugs		N1
	N1 and Process connection, based on IEC61518 with female thread on both sides of cover flange, with blind kidney flanges on back.		N2
	N2, and Material certificate for cover flange, diaphragm, capsule body, and blind kidney flange		N3
Wired tag plate		316 SST tag plate wired onto transmitter (Tag No.: Maximum. 16 characters.)	N4
Data configuration at factory*7	Data configuration for HART communication type	Software damping, Descriptor, Message	CA
	Data configuration for Fieldbus communication type	Software damping	CC
	Data configuration for Modbus communication type	Software damping, Descriptor, Message	CE
PID function *13		(For FOUNDATION Fieldbus protocol type) PID control function	LC1

Item	Description	Code	
Software downloading function *13	(For FOUNDATION Fieldbus protocol type) Based on FOUNDATION Fieldbus Specification(FF-883) Download class: Class1	EE	
Advanced diagnostics (For HART or FOUNDATION Fieldbus protocol type)	Multi-sensing process monitoring • Impulse line blockage detection *16 • Heat trace monitoring	HART protocol type FOUNDATION Fieldbus protocol type *17	DG6 DG1
European Pressure Equipment Directive*14	PED 2014/68/EU Category III, Module H, type of equipment: Pressure accessory-vessel, Type of fluid: Liquid and Gas, Group of fluid: 1 and 2 Lower limit of ambient and process temperature: -29°C	PE3	
Material certificate*8	Cover flange *9	M01	
	Cover flange, Process connector *10	M11	
	Cover flange, Diaphragm, Capsule body*9*22	MA1	
	Cover flange, Process connector, Diaphragm, Capsule body *10*22	MC1	
	Cover flange, Bolt and Nut for cover flange, Diaphragm, Capsule body, Vent and Drain plug, Vent screw, Capsule gasket*9*20*21	MG1	
	Cover flange, Process connector, Bolt and nut for cover flange, Bolt for process connector, Diaphragm, Capsule body, Vent and Drain plug, Vent screw, Capsule gasket*10*20*21	MH1	
Pressure test/ Leak test certificate *11	Test Pressure: 16 MPa(2300 psi)*18	Nitrogen(N ₂) Gas*12	T12
	Test Pressure: 25 MPa(3600 psi)*19	Retention time: one minute	T13
Calibration certificate	Text, Traceability	L4	
	Text, Traceability, Primary standards list	L5	
	Text, Traceability, Primary standards list, Calibration equipment list	L6	
	Text, Traceability, Primary standards list, Calibration equipment list, Calibration equipment certificate	L9	
Bug screen*23	With bug screen to the process connection port of the low side cover flange	BS	
Additional blind plug*24	Additional blind plug is attached to the conduit connection on both sides for storing transmitter	PP	

*1: Not applicable with color or coating change option.

*2: Applicable for Wetted parts material code S.

*3: The unit of MWP (Max. working pressure) on the name plate of a housing is the same unit as specified by option codes D1, D3, and D4.

*4: Applicable for vertical impulse piping type (Installation code 7) and Wetted parts material code S.

*5: Applicable for Output signal codes -E and -J. The hardware error indicates faulty amplifier or capsule.

*6: Applicable for Wetted parts material code S; Process connection codes 3, 4, and 5; Installation code 9; and Mounting bracket code N. Process connection faces on the other side of zero adjustment screw.

*7: Also see 'Ordering Information'.

*8: Material traceability certification, per EN 10204 3.1B.

*9: Applicable for Process connections codes 0 and 5.

*10: Applicable for Process connections codes 1, 2, 3, and 4.

*11: The unit on the certificate is always Pa unit regardless of selection of option code D1, D3 or D4.

*12: Dry nitrogen gas is used for oil-prohibited use (option codes K1, K2, K5, K6, K41, K42, K45, and K46).

*13: Applicable for Output signal code -F.

*14: Applicable for Measurement span codes M and H. If compliance with category III is needed, specify this code.

*15: 316 or 316L SST. The specification is included in Amplifier code 2.

*16: The change of pressure fluctuation is monitored and then detects the impulse line blockage. Refer to TI 01C25A31-01E for detailed technical information required for using this function.

*17: This option code must be specified with option code EE.

*18: Applicable for Capsule code L.

*19: Applicable for Capsule codes M and H.

*20: Not applicable with plug option code UN.

*21: Not applicable with option code N1, N2 and N3.

*22: Applicable for option code UN and N1.

*23: Applicable for process connection 0, 1, 2, 3, 4, 5, C, D, Q, R.

*24: Not applicable for electrical connection codes 0, 2, and 4.

DIMENSIONS

Unit: mm (approx.inch)

Vertical Impulse Piping Type (Installation code 7)

Horizontal Impulse Piping Type (Installation code 9)

- *1: When Installation code 8 is selected, high and low pressure side on above figure are reversed. (i.e. High pressure side is on the right side.)
- *2: When Option code K1, K2, K5, K6, K41, K42, K45, or K46 is selected, add 15 mm(0.59 inch) to the value in the figure.
- *3: When Option code K1, K2, K5, K6, K41, K42, K45, or K46 is selected, add 30 mm(1.18 inch) to the value in the figure.
- *4: When electrical connection code 7 or C is selected, a blind plug is protruded upto 8 mm(0.31 inch) from the conduit connection.
- *5: When option code /UN is specified, Vent/drain holes and plugs are not applicable.
- *6: When option code BS is selected, a bug screen is attached in the process connection port on the cover flange of low pressure side. No process connector for low pressure side is attached in that case.
- *7: When option code PP is selected, a blind plug is attached to the conduit connection on both sides.

F05E.ai

Unit: mm (approx.inch)

● Bottom Process Connection (Installation code B)

F06E.ai

- *1: A transmitter with SST housing is not applicable for mounting to horizontal 2-inch pipe.
- *2: When electrical connection code 7 or C is selected, a blind plug is protruded up to 8 mm(0.31 inch) from the conduit connection.
- *3: When option code UN is specified, Vent holes and plugs are not applicable.
- *4: When option code BS is selected, a bug screen is attached in the process connection port on the cover flange of low pressure side. No process connector for low pressure side is attached in that case.
- *5: When option code PP is selected, a blind plug is attached to the conduit connection on both sides.

● Terminal Configuration

● Terminal Wiring (HART and FOUNDATION Fieldbus protocol types)

SUPPLY	+	①] Power supply and output terminals
	-	②	
CHECK	+	③] External indicator (ammeter) terminals *1*2
	-	②	
PULSE	+	④] Pulse or status contact output terminals *2
	-	②	
			⊥ Ground terminal

- *1: When using an external indicator or check meter, the internal resistance must be 10Ω or less.
- *2: Not available for FOUNDATION Fieldbus communication type.

● Terminal Wiring (Modbus protocol type)

SUPPLY	+	①] Power supply terminals
	-	②	
MODBUS	A	③] Modbus communication (RS-485) terminals
	B	④

*1: To avoid the influence of external noise, use an electric counter which fits to the pulse frequency.
 *2: Resistor is not necessary in case of an electric counter which can receive contact pulse signal directly.
 *3: When using analog and pulse output simultaneously, the HART communication may be influenced by noise comparing analog output only. Take countermeasure for noise shown above, e.g. use shield cable etc.

< Ordering Information for HART protocol type >

Specify the following when ordering.

1. Model, suffix codes, and option codes
2. Calibration range and units
 - 1) Calibration range can be specified with range value specifications up to 5 digits (excluding any decimal point) for low or high range limits within the range of –32000 to 32000.
When reverse range is designated, specify Lower Range Value (LRV) as greater than Upper Range Value (URV).
 - 2) Specify unit from the tables “Calibration Units for HART protocol type”
3. Static pressure is selected from gauge pressure or absolute pressure.
4. TAG NO (if required)
Specified characters (up to 22 characters, or 16 characters when /N4 is specified) are engraved on the stainless steel tag plate fixed on the terminal box.
5. SOFTWARE TAG (if required)
Specified characters*1 are set as “Tag” (the first 8 characters) and “Long tag”*2 (32 characters) in the amplifier memory.
When the “SOFTWARE TAG” is not specified, specified “TAG NO” is set as “Tag” (the first 8 characters) and “Long tag”*2 (22 characters) in the amplifier memory.
*1: Output signal code “E” (HART 5): up to 8 characters are specified
Output signal code “J” (HART 5/HART 7): up to 32 characters are specified
*2: Applicable only for HART 7
6. Other factory configurations (if required)
Specifying option code CA will allow further configuration at factory.
Following are configurable items and setting range.
 - 1) Descriptor (up to 16 characters)
 - 2) Message (up to 30 characters)
 - 3) Software damping in second (0.00 to 100.00)
7. When the output signal code is “J”, specify the HART protocol revision “5” or “7”.

Table 11. Factory Setting for HART protocol type

Parameter	Default value	Description

< Ordering Information for FOUNDATION Fieldbus protocol type >

Specify the following when ordering.

1. Model, suffix codes, and option codes
2. Calibration range and units for Differential pressure, Static pressure and external temperature
 - 1) Calibration range can be specified with range value specifications up to 5 digits (excluding any decimal point) for low or high range limits within the range of -32000 to 32000. When reverse range is designated, specify Lower Range Value (LRV) as greater than Upper Range Value (URV).
 - 2) Specify unit. See Table 17 for settable unit at factory.
3. Static pressure is selected from gauge pressure or absolute pressure.
4. Tag Number (if required)

Specify software tag (PD_TAG) up to 32 characters to be written on the amplifier memory and Tag number up to 22 characters (or 16 characters when /N4 is specified) to be engraved on the tag plate separately.
5. Output mode (AI1 L_TYPE);

Select one from 'Direct', 'indirect Linear' or 'indirect SQRT' for output mode of AI1(Differential pressure).
6. Output scale and unit (AI1 OUT_SCALE);

This setting is used for Indicator and output of AI1 block for Differential pressure. The scale range can be specified with range limit specifications up to 5 digit (excluding any decimal point) for low and high range limits within the range of -32000 to 32000. When AI1 L_TYPE is Direct, these setting does not affect the output of AI1 block.
7. Specify Node address in hexadecimal.
8. Select 'BASIC' or 'LINK MASTER' for Operation Functional Class.
9. Other factory configurations (if required)

Specifying option code CC will allow further configuration at factory.
Following is configurable item and setting range:
Software damping in second (0.00 to 100.00)

Table 17. Factory Setting for FOUNDATION Fieldbus protocol type

Parameter	Default value	Description

< Ordering Information for Modbus protocol type >

Specify the following when ordering.

1. Model, suffix codes, and option codes
2. Calibration range and units
 - 1) Calibration range can be specified with range value specifications up to 5 digits (excluding any decimal point) for low or high range limits within the range of –32000 to 32000.
When reverse range is designated, specify Lower Range Value (LRV) as greater than Upper Range Value (URV).
 - 2) Specify unit from the tables “Calibration Units for Modbus protocol type”
3. Static pressure is selected from gauge pressure or absolute pressure.
4. TAG NO (if required)
Specified characters (up to 22 characters, or 16 characters when /N4 is specified) are engraved on the stainless steel tag plate fixed on the terminal box.
5. SOFTWARE TAG (if required)
Specified characters (up to 32 characters) are set as “Tag” (the first 8 characters) and “Long tag” (32 characters) in the amplifier memory.
When the “SOFTWARE TAG” is not specified, specified “TAG NO” is set as “Tag” (the first 8 characters) and “Long tag” (22 characters) in the amplifier memory.
6. Other factory configurations (if required)
Specifying option code CE will allow further configuration at factory.
Following are configurable items and setting range.
 - 1) Descriptor (up to 16 characters)
 - 2) Message (up to 30 characters)
 - 3) Software damping in second (0.00 to 100.00)

< Information on EU WEEE Directive >

EU WEEE (Waste Electrical and Electronic Equipment) Directive is only valid in the EU.

This instrument is intended to be sold and used only as a part of equipment which is excluded from WEEE Directive, such as large-scale stationary industrial tools, a large-scale fixed installation and so on, and, therefore, subjected to the exclusion from the scope of the WEEE Directive. The instrument should be disposed of in accordance with local and national legislation/regulations.
